## Fitting Silica Gel Packs into the GSM Housing

If condensation within the GSM housing unit is a problem, fitting silica gel packs may help. Before fitting, make sure there are no water droplets inside the box, carefully dry with a tissue if necessary. Look especially along the top and bottom of the box and also on the underside of the aluminium pager clip.

There is only a little space to fit the silica gel packs. Use the space between the aluminium pager clip and the top of the box as shown in the diagram below. If a pager is present, place 2 small packs either side of the pager clip.

**DO NOT PLACE SILICA GEL NEAR THE ELECTRONICS BOARD** as the packs could be punctured or torn by sharp connections on the board.
