CARRY CASE FOR MINIMET WEATHER STATIONS

The Skye MiniMet weather station is easily portable and can be quickly assembled for use in 20-30 mins.

Each instrument* which makes up the MiniMet station is held firmly and safely in place in the waterproof case, suitable for storage, transportation and even shipping by courier!

The instrument case is waterproof and air tight, rated to IP65. It is tough, durable and is fitted with wheels for easy transportation.

* The rain gauge and mast cannot fit into this main case, they have their own individual soft cases which are not waterproof. They do not have the solid, durable design of the main instrument case and should not be shipped by courier without extra protection.

The mast case holds sections of 1m poles, 2 or more poles can be fitted together to make up longer masts as required. The mast base, guylines and toolkit can all fit into the case with the mast sections.
