## CARRY CASE FOR MINIMET WEATHER STATIONS

The Skye MiniMet weather station is easily portable and can be quickly assembled for use in 20-30 mins.

Each instrument\* which makes up the MiniMet station is held firmly and safely in place in two briefcase style cases, suitable for storage and transportation.

These lightweight and durable polypropylene plastic cases are splashproof and lockable, with a double wall for toughness.

\* The rain gauge and mast cannot fit into this main case, they have their own individual soft cases which are not waterproof.

The mast case holds sections of 1m poles, 2 or more poles can be fitted together to make up longer masts as required. The mast base, guylines and toolkit can all fit into the case with the mast sections.

If a more durable and waterproof single carry case for the MiniMet instruments is required, please ask for details on the ACC/21A carry case.

### ORDERING INFORMATION

- |         |  |
|---------|--|
