

# MiniMetView & MiniMetView+

MiniMetView and MiniMetView+ are designed to work seamlessly with MiniMet Automatic Weather Stations fitted with GPRS connectivity. This new software also boasts mobile browser compatibility to allow users to view their weather data on the go. Skye MiniMetView and MiniMetView+ are a direct replacement for our previous minimet.co.uk website and Live Display software.

MiniMetView is a free service for all Skye's GPRS customers that allows full access to and download of their weather station data in .xlsx format, making it easily opened in Microsoft Excel and other data processing applications. The date range of the data download can be selected by the user at the time of download, meaning you can download just the data you need.

MiniMetView+ is a paid service that offers all of the benefits of MiniMetView, but with the added benefits of a live dashboard and graphing tools. The live dashboard offers gauges for each sensor set up on the weather station, including a windrose for wind measurements.

The dashboard gives an up to date live view of the weather which can be used as an early warning system for some industries. It is also perfect for visitor centres and applications where staff/customers are interested in monitoring the weather outside.

The graphing tools will allow users to view data for their selected date range in graph format, while still being able to view specific datapoints on the graph. Alongside these features, customers will also be able to set up alarms to inform them when sensor values fall outside of a minimum or maximum set value.
